

PHILODENDRON FLORIDA GHOST

Cheat Sheet

LIGHT

Bright, indirect sunlight is best for your Philodendron Florida Ghost.

TEMPERATURE

The best temperature for this plant is between 65°F-95°F (18°C-35°C). Don't expose it to temperatures below 60°F (15°C). Does not tolerate frost and freezing temperatures.

WATERING

Allow the topsoil to dry out between waterings. In winter, reduce watering.

HUMIDITY

Does fine in average household humidity but thrives in high humidity (60%+). To increase the humidity, place it on a tray with damp pebbles or make use of a humidifier.

PROPAGATION

Easily propagated through stem cuttings. Root cuttings directly in fresh soil. Use a new pot with drainage holes.

GROWTH

Florida Ghost is a slow grower. To encourage growth, fertilize regularly.

TOXICITY

Philodendron Florida Ghost is toxic. Keep it out of reach of both children & pets.

SOIL

Philodendron Florida Ghost prefers well-draining soil. An organic soil mix with bark, charcoal and peat produces great results.

(RE)POTTING

Repot every other year when your plant outgrows its pot. Make sure to use a pot with drainage holes!

PESTS & DISEASES

Watch out for aphids & mealybugs infestations. Use neem oil or rubbing alcohol to get rid of these pesky pests. Common diseases: Erwinia blight & magnesium deficiency

FERTILIZER

During growing season (spring & summer, fertilize twice a month. Use a balanced liquid fertilizer. Feed less in winter.

COMMON PROBLEMS

Pale Leaves: If your Philodendron Florida Ghost features (a lot of) pale leaves, chances are that you are underfeeding it. Try fertilizing a bit more often in this case.

BACTERIAL LEAF SPOT: Dark, necrotic spots on the leaves of your Philodendron Florida Ghost are an indicator of Bacterial leaf spot. Remove affected leaves immediately to make sure the disease is not spreading over to adjacent leaves.
